

# Essential Information for Fitment Style

Dropper Fitment Style Glass Boston Rounds have a unique finish when compared to a standard Glass Boston Round. These 18MM (DIN) finish bottles are made with a transferring to accommodate tamper-evident closures. As shown in the illustration, standard Boston Rounds have a different structure when compared to the 18MM (DIN) Fitment Style.

When packaging essential oils, Fitment Style Boston Rounds are perfect when paired with a Fitment Style Closure. The snug fit of the inverted control dropper allows for the perfect dispensing of oils without leakage. The tamper-evident feature gives the consumer added safety assurance.

Essential oils need to be stored away from heat and sunlight. Because of this, amber glass is most often used for essential oils. Other darker colors still offer UV protection,

but may not offer as much as an amber bottle. If you decide to use a clear bottle, one way to protect the oils is by including information on keeping the bottle stored in a dark location. Another way is to use a wrap-around label that blocks much of the UV light. Clear bottles can be a great selling point by allowing consumers to see the product inside.
